

# Audits Overview

## SUMMARY

SQA is a leader in managing customer's worldwide supplier and internal audit programs assuring systemic evaluation that verify adherence to regulatory requirements, policies and industry standards relevant to the final product's grade and manufacturing lifecycle. We have associates in every corner of the globe who have subject matter expertise in different standards including GxP, ISO and specific commodity requirements or guidelines.

## SCOPE

SQA conducts compliance, onboarding and surveillance audits globally by a team of associates that are qualified through a rigorous evaluation and onboarding process assuring the highest level of audit deliverables. Our client success team works with you to schedule and execute your audit program to your expected timelines.

## BENEFITS

Assuring Subject Matter Expertise on each audit by commodity and regulatory market served.

Reduce management, training and travel costs of internal resources to conduct audits.

Conduct audits by associates who know the culture, language and regulatory knowledge of the market served.

Unbiased evaluation of suppliers solely based on regulatory requirements, standard adherence, SOPs and contractual requirements.

# Audits Overview

## PROCESS

Client provides a list of suppliers and locations to be audited along with any special requests or focus areas.

Introductions and scheduling between the Supplier and SQA.

Supplier sends out pre-reads after the pre-audit call.

The SQA Assessor goes on site to execute a thorough review of the supplier's capabilities.

Audit report is sent to the client after content and technical review.  
The report can use any template, client supplied or SQA supplied.
